

KT - Reindexer

Note:

video link (gdrive)

https://drive.google.com/file/d/1_ujRnHWfBPtIMOSghfvJMQh9isrhSqom/view?usp=sharing

Passcode: Q?U^2=Pq

Topics:

scripts

adjust product URLs for each account

dataconnect

data hub

configurations

.json for each account to be reindexed

dockerizer

create docker to run in Google cloud (vm0)

GCP steps

Note2:

- In the video, I forgot to walk thru the url-updater method (`_adjust_product_url`). It is in the `productreindexer.py` script.

It is simple python code that updates the 'url' attribute using the format:

config->product-url-preamble + pid + ____ + pid

This is the format the SPA uses to build product urls

Note3:

In the current version, only the product-urls are adjusted. The code could be modified to update each product's variants' swatch and thumb images as well.
